# **Standard Specification for** Molybdenum and Molybdenum Alloy Bar, Rod, and Wire<sup>1</sup>

This standard is issued under the fixed designation B 387; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reapproval.

## 1. Scope

1.1 This specification covers unalloyed molybdenum and molybdenum alloy bar, rod, and wire as follows:

1.1.1 Molybdenum 360-Unalloyed vacuum arc-cast molybdenum.

1.1.2 Molybdenum 361-Unalloyed powder metallurgy molybdenum.

1.1.3 Molybdenum Alloy 363-Vacuum arc-cast molybdenum-0.5 % titanium-0.1 % zirconium (TZM) alloy.

1.1.4 Molybdenum Alloy 364-Powder metallurgy molybdenum-0.5 % titanium-0.1 % zirconium (TZM) alloy.

1.1.5 Molybdenum 365-Unalloyed vacuum arc-cast molybdenum, low carbon.

1.1.6 Molybdenum Alloy 366-Vacuum arc-cast molybdenum, 30 % tungsten alloy.

1.2 The values stated in inch-pound units are to be regarded as the standard. The values given in parentheses are provided for information purposes only.

## 2. Referenced Documents

2.1 ASTM Standards:

E 8 Test Methods for Tension Testing of Metallic Materials<sup>2</sup> F 289 Specification for Molybdenum Wire and Rod for Electronic Applications<sup>3</sup>

## 3. Terminology

3.1 Definitions of Terms Specific to This Standard:

3.1.1 bar and rod—any straight product with a round, rectangular, hexagonal, or octagonal solid cross section, 4 in. (101.6 mm) in diameter or less, or of equivalent cross-sectional area.

3.1.2 wire—any product furnished in coils or on spools or reels.

NOTE 1-This specification covers wire no smaller than 0.020 in. (0.51 mm) in diameter or of equivalent cross-sectional area. Specification F 289 covers diameters up to 0.020 in.

## 4. Ordering Information

4.1 Orders for material under this specification shall include the following information as applicable:

4.1.1 Material number and temper designation (Section 1 and Table 3),

- 4.1.2 Product form (Section 3),
- 4.1.3 Chemical requirements (Table 1 and Table 2),
- 4.1.4 Mechanical requirements (Section 7),

4.1.5 Softening temperature (Section 8),

4.1.6 Tolerances (Section 9 and Table 4),

4.1.7 Workmanship and quality level requirements (Section 10),

4.1.8 Packaging (Section 16),

4.1.9 Marking (Section 15),

4.1.10 Certification and reports (Section 14), and

4.1.11 Disposition of rejected material (Section 13).

## 5. Materials and Manufacture

5.1 The various molybdenum mill products covered by this specification shall be manufactured with the conventional extrusion, forging, swaging, rolling, and drawing equipment normally found in primary ferrous and nonferrous plants. The ingot metal for Molybdenum 360 and 365 and Molybdenum Alloys 363 and 366 is vacuum arc-melted in furnaces of a type suitable for reactive, refractory metals, and for Molybdenum 361 and 364 the metal is consolidated by powder metallurgy methods.

### 6. Chemical Composition

6.1 The molybdenum and molybdenum alloy ingots and billets for conversion to finished products covered by this specification shall conform to the requirements of the chemical composition prescribed in Table 1.

6.2 Check Analysis:

6.2.1 Check analysis is an analysis made by the purchaser or the manufacturer of the metal after it has been processed into finished mill forms, and is either for the purpose of verifying the composition of a heat or lot or to determine variations in the composition within a heat or lot.

6.2.2 Check analysis tolerances do not broaden the specified heat analysis requirements but cover variations between laboratories in the measurement of chemical content.

6.2.3 The manufacturer shall not ship material that is outside the limits specified in Table 1 for the applicable type,

<sup>A</sup>See Table 1, Footnote A.

with the exception of oxygen and nitrogen, whose percentage may vary with the method of fabrication.

6.2.4 Check analysis limits shall be as specified in Table 2.

## 7. Mechanical Properties

7.1 Material supplied under this specification shall conform to the mechanical property requirements given in Table 3 when tested in the longitudinal direction of working at test temperatures between 65 and 85°F (18.3 and 29.4°C).

7.2 Tension test specimens shall be prepared and tested in accordance with Test Methods E 8. Tensile properties shall be determined using a strain rate of 0.002 to 0.005 in./in.·min (or mm/mm·min) through 0.6 % offset and 0.02 to 0.05 in./in.·min to fracture.

# 8. Softening Temperature

8.1 If specified, the material supplied under this specification shall have mechanical properties not lower than those shown in Table 3 after reheating in a protective atmosphere to the following temperatures for a period of 30 min;

Molybdenum Type	°F	°C
360	1650	900
361	1650	900
363	2100	1150
364	2100	1150
365	1650	900
366	2000	1100

#### 9. Permissible Variations in Dimensions

9.1 Diameter, and out-of-round tolerances on molybdenum and molybdenum alloy products covered by this specification shall be as specified in Table 4.

9.2 Length and straightness tolerances and limitations shall be as follows:

9.2.1 Cut lengths,  $\pm \frac{1}{4}$  in. (6.35 mm).

9.2.2 Straightness, maximum deviation of 0.050 in./ft (1.27 mm/305 mm) in any length.

9.3 Permissible variations in dimensions for wire, square, or rectangular bars, and hexagonal or octagonal rods, shall be as agreed upon between the manufacturer and the purchaser.

### 10. Workmanship, Finish, and Appearance

10.1 Molybdenum and molybdenum alloy bar, rod, and wire shall be free of injurious external and internal imperfections of a nature that will interfere with the purpose for which it is intended.

10.2 Material may be finished as forged, rolled, swaged, or drawn (black), as cleaned, as machined, or as ground.

10.3 The manufacturer shall be permitted to remove surface imperfections provided such removal does not reduce the dimension below the minimum permitted by the tolerance for the dimension specified.

## 11. Sampling

11.1 Care shall be exercised to ensure that the sample selected for testing is representative of the material and form and is not contaminated by the sampling procedure.

## 12. Methods of Chemical Analysis

12.1 The chemical composition enumerated in this specification shall, in case of disagreement, be determined in accordance with the test methods approved for referee purposes by ASTM.<sup>4</sup> Where such test methods are not available, methods of analysis as mutually agreed upon between the manufacturer and the purchaser shall be employed.

# 13. Rejection

13.1 Material not conforming to this specification or to authorized modifications shall be subject to rejection. Unless

Copyright by ASTM Int'l (all rights reserved); Thu Apr 16 05:00:38 EDT 2009 Downloaded/printed by Laurentian University pursuant to License Agreement. No further reproductions authorized.

		2 to 3 <sup>1</sup> / <sub>2</sub> (50.8 to 88.9)	75 (515)	45 (310)	10	215 max

<sup>A</sup>Mechanical properties of all bars, and rods other than round, shall be as agreed upon between the manufacturer and the purchaser.

<sup>B</sup>SR = stress-relieved; RX = essentially fully recrystallized.

<sup>c</sup>The gage length is 10 in. (254 mm) for rods 0.020 to 1/8 in. (0.51 to 3.18 min) in diameter only. All other elongation values are for 1-in. (25-mm) gage lengths.

#### TABLE 4 Permissible Variations in Diameter and Limits of Tolerance Out-of-Round for Rolled, Forged, Extruded, Swaged, or Drawn Rounds (Descaled)

	Permissible Variation, in. (mm)				
Diameter, in. (mm)	Dian	Out-of-Round			
	+	-	- Out-oi-Round		
0.020 to 1/16 (0.51 to 1.59)	0.001 (0.02)	0.001 (0.02)	0.001 (0.02)		
Over 1/16 to 9/32 (1.59 to 7.14)	0.002 (0.05)	0.002 (0.05)	0.004 (0.10)		
Over %2 to 13/32 (7.14 to 10.32)	0.010 (0.25)	0.005 (0.13)	0.008 (0.20)		
Over <sup>13</sup> / <sub>32</sub> to <sup>5</sup> / <sub>8</sub> (10.32 to 15.9)	0.010 (0.25)	0.005 (0.13)	0.012 (0.30)		
Over 5/8 to 7/8 (15.9 to 22.2)	0.015 (0.38)	0.005 (0.13)	0.015 (0.38)		
Over 7/8 to 1 (22.2 to 25.4)	0.020 (0.51)	0.005 (0.13)	0.015 (0.38)		
Over 1 to 1% (25.4 to 34.9)	0.020 (0.51)	0.010 (0.25)	0.018 (0.46)		
Over 13/8 to 11/2 (34.9 to 38.1)	0.020 (0.51)	0.015 (0.38)	0.020 (0.51)		
Over 11/2 to 15/8 (38.1 to 41.3)	0.025 (0.64)	0.015 (0.38)	0.020 (0.51)		
Over 15% to 2 (41.3 to 50.8)	0.030 (0.76)	0.020 (0.51)	0.025 (0.64)		
Over 2 to 21/2 (50.8 to 63.5)	0.032 (0.81)	0.032 (0.81)	0.025 (0.64)		
Over 21/2 to 31/4 (63.5 to 82.6)	0.032 (0.81)	0.032 (0.81)	0.027 (0.69)		
Over 31/4 to 31/2(82.6 to 88.9)	0.045 (1.14)	0.045 (1.14)	0.040 (1.02)		
Centerless Ground Rounds					
1/16 to 1/2 (1.58 to 12.7)	0.002 (0.05)	0.002 (0.05)			
Over 1/2 (12.7)	0.003 (0.08)	0.003 (0.08)			

otherwise specified, rejected material may be returned to the manufacturer at the manufacturer's expense unless the purchaser receives, within three weeks of notice of rejection, other instructions for disposition.

# 14. Certification

14.1 If requested, the manufacturer shall supply at least three copies of a report of the chemical analysis of each heat (Types 360, 363, 365, and 366) or powder metallurgy product from the powder lot (Types 361 and 364) represented in the shipment, and reports of the result of tests of each size of each heat or powder lot to determine properties required in Sections 7.1 and 8.

14.2 The report shall include the purchase order number, heat number, this specification number, and quantity and number of items covered by shipment.

### **15. Product Marking**

15.1 Each bar, rod, bundle, box, coil, or spool shall be legibly and conspicuously marked or tagged with the number of this specification, heat or lot number, manufacturer's identification, type, temper, and nominal size.

# 

## 16. Packaging and Package Marking

16.1 Unless otherwise specified, material purchased under this specification must be packaged by box or other suitable protective containers and should be so marked as to indicate the nature of any special handling required.

## 17. Keywords

17.1 molybdenum; molybdenum alloy bar; molybdenum alloy rod; molybdenum alloy wire

The American Society for Testing and Materials takes no position respecting the validity of any patent rights asserted in connection with any item mentioned in this standard. Users of this standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, are entirely their own responsibility.

This standard is subject to revision at any time by the responsible technical committee and must be reviewed every five years and if not revised, either reapproved or withdrawn. Your comments are invited either for revision of this standard or for additional standards and should be addressed to ASTM Headquarters. Your comments will receive careful consideration at a meeting of the responsible technical committee, which you may attend. If you feel that your comments have not received a fair hearing you should make your views known to the ASTM Committee on Standards, at the address shown below.
